

MONGODB

REPLACING DOCUMENTS

REPLACING A SINGLE DOCUMENT

- ▶ `db.collection.replaceOne()`
- ▶ <https://docs.mongodb.com/manual/reference/method/db.collection.replaceOne/>

MONGODB

DEMONSTRATION

OBSERVATIONS

- ▶ Replace takes a filter to determine which document to replace
- ▶ Use a uniquely indexed filter to be sure which document will be replaced
- ▶ Specifying an empty filter will replace the first document from the collection
- ▶ Will create a new document if the filter does not match an existing document and the upsert flag is set

PRACTICAL

- ▶ Experiment with replacing documents
- ▶ Try using upsert to create documents using replace
